### **DETAILED ACTION**

The examiner acknowledges a submission of the amendment filed on 8/7/2006.

The amendments to claims 1-13, 15, 16, 21, & 22 and specification are accepted.

The previously made 112 rejections to claims 7 & 11 have been withdrawn in view of the amendments.

### ***Allowable Subject Matter***

Claims 1-22 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

In regard to Claims 1 & 12

Early (US 6,317,356) teaches a multi phase switching device in which each line comprises two separate switches and wherein one switch is switched at a positive going zero crossing and the other switch is switched at the negative going zero crossing (See Column 4, Line 66 to Column 5, Line 25 and Figures 2, 3, 4A & 4B). Coston (US 4,713,744) teaches a multiphase electric load wherein the phases of the load are switched on and off at the zero crossings however there is a lack of motivation to combine the multi phase load of Coston with the switching scheme of Early in which to switch some phases on/off during a positive amplitude zero-crossing and at least another separate phase at a negative amplitude zero-crossing.

In regard to Claim 16

Claim 16 is allowable for reasons disclosed in the previous office action.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Shin et al. (US 4,901,005) teaches a zero voltage crossover detector for polyphone systems (See Column 1, Line 10 to Column 2, Line 4).
- Smith (US 2004/0251910 A1, See Paragraph 2).
- Messersmith (2004/0051494 A1).
- Briesen et al. (US 2003/0112640 A1).
